Aliases :

There are no other names known for **Trojan:JS/Redirector.N**

.

Explanation :

Trojan:JS/Redirector.N is detection for specific JavaScript contained within web pages. This JavaScript trojan can be injected into an HTML page via an SQL injection attack, or may be present on a malicious web site, and can redirect you to websites other than expected. It is also possible for an attacker to craft HTML-based e-mail messages containing the script. The destination web page of the redirect can include specially formed IFrame tags that point to remote websites containing other malicious content, for example malicious JavaScript containing an exploit for a specific vulnerability.

Additional information

Trojan:JS/Redirector.N was part of several SQL injection attacks over several months and involved a domain named 'adw95.com'.
